Figures 1 and 2 show the results of the regression analysis. The results show that the regression model is significant at the 0.05 level of significance. The adjusted R-squared value is 0.75, indicating that 75% of the variance in the dependent variable is explained by the independent variables. The results of the regression analysis are presented in Table 1.

По давности заселенія края, жители его распределяются на старожиловъ и переселенцевъ; къ первымъ относятся татары, ко вторымъ принадлежатъ армяне, преимущественно выселившіеся въ предѣлы Шаруро-Даралагезскаго уѣзда изъ Персіи, въ 30—40-хъ годахъ.

^aValues are means ± standard deviation; n = number of subjects.

The above two propositions result, in effect, appeared as well as the other 11 results in the paper.
